

Prepare a useful review request

A fictional study-preparation checklist. Use it to see how structured content becomes a checked document.

01 / Gather the preparation notes

- ☐ **Education summary**
Use a fictional summary; no certificates or personal documents.
- ☐ **Language summary**
Record whether the demo note is available. Missing is a valid state.
- ☐ **Target note**
Use the fictional preparation target from the bundled specification.

02 / Read the preliminary result

Preparation state	What the demo says
Missing preparation item	The result lists what is absent.
All checklist items present	The preparation list is complete.
Either result	Eligibility remains undecided.

A complete checklist is not an admission decision. This example has no real university policy behind it.

03 / Choose whether to request review

The demo creates a CRM-like record only after an explicit review request. Repeating the same request returns the same record.

Inspect the synthetic handoff

Open `demo/admission/crm_record.json` in this repository.

Synthetic demo data — no real customer information.

This fictional example makes no promise about admission or institutional decisions.
